Comparator Wikipedia

January 15th, 2019 - In electronics a comparator is a device that compares two voltages or currents and outputs a digital signal indicating which is larger It has two analog input terminals V_1 and V_2 and one binary digital output The output is ideally $V_1 > V_2$ $V_1 < V_2$ A comparator consists of a specialized high gain differential amplifier They are commonly used in devices that measure and digitize analog
